IVANS
Transformation Station

What is Transformation Station?

Transformation Station is an IVANS managed data exchange, designed to work directly from within your existing agency management system. While this component is largely invisible to the agency users, it allows for a common method of communication between your agency and your companies, using the data exchange and reformatting services of Transformation Station.

How does it work?

Data entered into your policy detail screens can be communicated with multiple companies for real-time rating and underwriting, providing accurate responses, directly from the companies in seconds.

- o Allows you to process New, Renewal and Policy Changes directly with your companies, without having to leave your agency system.
- o Additionally, companies can provide value-added information, such as proposals and coverage descriptions, either within their response, or with direct access links to their web sites.

What else does Transformation Station Do?

Transmit policy and claim submissions to your companies, directly from your policy and claim detail screens.

- o Real-time delivery directly to your companies; or,
- o Real-time delivery to your company's IVANS upload mailbox

What else does Transformation Station Do?

Retrieve current Policy, Billing and Claims information from your companies in real-time, with the click of a button from your policy detail screens.

- o Allows you to quickly and accurately respond to your customers servicing needs, without the long delays or out-of-date information

Launch company websites, pre-populated with your policy data, for special transactions, or non-integrated processing.

Transformation allows your insurance companies to become integrated extensions of your existing agency management system.
